Description	Section Number &c.	Contributor.
<p>A mulberry calculus exceedingly irregular in shape, weighing $\frac{1}{2}$ oz troy and marked "fig"</p>	5055	<p>From the Gibson collection</p> <p>April 29/68</p>
<p>A mulberry calculus flat, oval & rough, weighing 211 grs troy</p>	5056	<p>From the Gibson collection</p> <p>April 29/68</p>
<p>A nearly spherical mulberry or composite calculus, weighing 187 grs. Its surface is worn apparently by attrition since removal,</p>	5057	<p>From the Gibson collection</p> <p>April 29/68</p>
<p>A phosphatic calculus formed about a hair-pin weighing 1 oz & 38 grs troy. It is marked from Dr Jha— This is Dr Hunt's case See Gibson's Surgery Vol II page 230.</p>	5058	<p>From the Gibson collection</p> <p>April 29/68</p>
<p>A mulberry calculus (partly), somewhat heart-shaped weighing 1 oz & 427 $\frac{1}{2}$ grs troy. Its surface is not very rough. It is marked "Kicker"</p>	5059	<p>From the Gibson collection</p> <p>April 29/68</p>
<p>A vesical urinary calculus removed by lithotomy, apparently of urates weighing 125 grs troy.</p>	5060	<p>From the Gibson collection</p> <p>April 29/68</p>

Description	Section Number &c	Contributor
<p>A vesical urinary calculus removed by lithotomy, apparently of urates weighing 116 grs troy.</p>	5061	<p>From Gibbon's collection</p> <p>April 29/68</p>
<p>A vesical urinary calculus removed by lithotomy apparently of urates, weighing 109½ grs troy.</p>	5062	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>A vesical urinary calculus removed by lithotomy, Large elliptical and dense, sawn open to exhibit its composite structure, Its weight is 2 g 336 grs troy.</p>	5063	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>A vesical urinary calculus removed by lithotomy, ^{flattened, oval,} porous, quite hard, sawn to show the internal structure, Weight 38½ grs.</p>	5064	<p>From the Gibbon collection.</p> <p>April 29/68</p>
<p>A vesical urinary calculus removed by lithotomy, oblong oval, Weight 10 g and 23 grs troy,</p>	5065	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>Two vesical urinary calculi removed by lithotomy, The larger weighing 1 g and 52½ grs the other 10 g and 48 grs troy, both smooth and flattened on both sides by contact in the bladder marked "Bamm"</p>	5066	<p>From the Gibbon collection</p> <p>April 29/68</p>

Description	Section Number &c.	Contributor
<p>Two vesical urinary calculi removed by lithotomy, fusiform, apparently phosphatic with facets smoothed by intra-vesical attrition. The larger weighs 1 g $\frac{1}{2}$ 331 grs the smaller 172 grs</p>	5067	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>A vesical urinary calculus removed by lithotomy, from a boy six years of age, weighs 45 grs Troy. Presented to Prof. Gibbon by 1853 by Wm H. B. Goodwin.</p>	5068	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>Fragment of a vesical urinary calculus removed by Lithotomy by Dr P. C. Spencer of Petersburg Va, weighs 21 grs.</p>	5069	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>Two vesical urinary calculi removed by lithotomy from the bladder of Mr McDaniel. They are irregularly oval. The larger weighs 1 g 113 grs, the smaller 1 g $\frac{1}{2}$ 82 grs Troy.</p>	5070	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>A vesical urinary calculus removed by lithotomy, Weighing 2 g $\frac{1}{2}$ 328 $\frac{1}{2}$ grs</p>	5071	<p>From the Gibbon collection</p> <p>April 29/68</p>
<p>Two fragments of a phosphatic calculus removed by lithotomy in 1835 weighing 29 grs.</p>	5072	<p>From the Gibbon collection</p> <p>April 29/68</p>

Description	Section Number To	Contributor
<p>A large regularly flattened oval phosphatic calculus, removed by lithotomy. The outer layer has been crumpled away. Weight 1g 178 grains Troy.</p>	5073	<p>From the Gibbon collection April 29/68</p>
<p>Prismoid vesical urinary calculus Weight 1g. 37 grs Troy.</p>	5074	<p>From the Gibbon collection April 29/68</p>
<p>A vesical urinary calculus laminated, hard, and oval with rather a rough surface broken at one end. weighing 452 grs Troy. It is defaced by attempts to saw it.</p>	5075	<p>From the Gibbon collection April 29/68</p>
<p>Fragments of a large vesical urinary calculus dark colored, friable,</p>	5076	<p>From the Gibbon collection April 29/68</p>
<p>Fragment of vesical urinary calculus, white, friable.</p>	5077	<p>From the Gibbon collection April 29/68</p>
<p>Half of a vesical urinary calculus sawn transversely and exhibiting four or more layers widely differing in density. Weight 324 grs. Troy,</p>	5078.	<p>From the Gibbon collection April 29/68</p>

Description	Section Number	Contributor
An oblong ovoid vesical urinary calcareous calculus, Weight $366\frac{1}{2}$ grs Troy.	5079	From the Gibbon collection Apl. 29/68
A flattened oval vesical urinary calculus, white, brittle, Weight $244\frac{1}{4}$ grs Troy.	5080	From the Gibbon collection Apl. 29/68
A vesical urinary calculus, prismoidal, ovoid, weighing $284\frac{1}{2}$ grs. It possibly is the case of Baum's 5066.	5081	From the Gibbon collection Apl. 29/68
A vesical urinary calculus spherical, very hard, dark brown, weighing 197 grs.	5082	From the Gibbon collection Apl. 29/68
A vesical urinary calculus lenticular, dark brown, hard, laminated, scraped on two sides to show layers Present weight $45\frac{1}{2}$ grs.	5083	From the Gibbon collection Apl. 29/68
A vesical urinary calculus ovoidal, not very dense, the outer layer broken off of an eighth of the periphery.	5084	From the Gibbon collection Apl. 29/68

Description	Section Number &c	Contributor
<p>A vesical urinary calculus, ovoidal, the outer crust crystalline, separated over a small space Present weight 153 $\frac{1}{2}$ grs Marked "G. G. - J. W. Cor."</p>	5085	<p>From the Gibbon collection <i>Ap. 29/68</i></p>
<p>A vesical urinary calculus spheroidal, laminated, much of the outer layers have been broken off. Present weight, 143 $\frac{1}{2}$ grs.</p>	5086	<p>From the Gibbon collection <i>Ap. 29/68</i></p>
<p>A vesical urinary calculus spheroidal, with a rough surface, light colored, Weight 123 $\frac{1}{2}$ grs Troy.</p>	5087	<p>From the Gibbon collection <i>Ap. 29/68</i></p>
<p>A vesical urinary calculus lenticular dark gray, outer layer broken, Weight 79 grains Marked, "Louis Town"</p>	5088	<p>From the Gibbon collection <i>Ap. 29/68</i></p>
<p>A vesical urinary calculus regularly ovoid, white granular surface, Weight 67 $\frac{1}{4}$ grs.</p>	5089	<p>From the Gibbon collection <i>Ap. 29/68</i></p>
<p>A vesical urinary calculus, fig shaped, drab colored, on the sides the outer layer has crumbled away, the surface of the second layer is polished Weight 103 grs Troy.</p>	5090	<p>From the Gibbon collection <i>Ap. 29/68</i></p>

Description	Section Number	Contributor
A vesical urinary calculus, discoid, very porous, dark gray, a slice has been separated for analysis weight 7 1/4 grs.	5091	From the Gibbon collection Apl. 29/68
A vesical urinary calculus ovoid, rough white surface weight 7 1/2 grs	5092	From the Gibbon collection Apl. 29/68
A vesical urinary calculus, small, ovoid, rather smooth. In two places, where the outer layer is removed it is very smooth weight 23 grs.	5093	From the Gibbon collection Apl. 29/68
A vesical urinary calculus white, elongated, pyriform and smooth weight 87 grs.	5094.	From the Gibbon collection. Apl. 29/68
A fig shaped dark brown urinary calculus weighing 56 1/2 grs.	5095	From the Gibbon collection Apl. 29/68
An irregular rough white and fawn colored urinary calculus weight 111 1/2 grs.	5096	From the Gibbon collection Apl. 29/68

Description	Section Number &c.	Contributor
An ovoidal soft whitish vesical urinary calculus. Weight 282½ grs.	5097	From the Gibbon collection Appl. 29/68
An irregular, ovoid, crumbling phosphatic urinary calculus. Weight 151 grs.	5098	From the Gibbon collection Appl. 29/68
A section of urinary calculus with a nucleus of uric acid, surrounded by phosphates Weight 123 grs.	5099	From the Gibbon collection Appl. 29/68
A urinary calculus, mid, measuring 2¾ by 1¾ inches Weight 362 298 grs.	5100	From the Gibbon collection Appl. 29/68
A vesical urinary calculus, very large, smooth on the exterior, sawn open.	5101	From the Gibbon collection Appl. 30/68
A large phosphatic vesical urinary calculus sawn open to show the internal structure	5102	From the Gibbon collection Appl. 30/68

Description	Section Number &c.	Contributor
A large vesical urinary calculus sawn open to show the dissimilarity of its laminae.	5103	From the Gibbon collection Ap. 30/68
A large phosphatic calculus,	5104	From the Gibbon collection Ap. 30/68
Calvaria showing ulceration of both parietals and left temporal	5105	From the Gibbon collection Formerly 95 Gibbon collection. Ap. 30/68
Cranium of a young subject showing depressed fracture of the left parietal, the crown of a trephine having been applied above and below the depression	5106	From the Gibbon collection Formerly 103 Gibbon collection. Ap. 30/68
Cranium showing saw cuts of right parietal, a fissure extends nearly to base of left parietal.	5107	From the Gibbon collection Formerly 104 Gibbon collection. The stand is marked "W & G from Dubouy" Ap. 30/68
Frontal sphenoid, ethmoid and bones of face showing ulceration and absorption of middle of os frontis.	5108	From the Gibbon collection Formerly 98. Gibbon collection. Ap. 30/68

Description	Section Number &c	Contributor
Scrofulous ulceration and necrosis of the left Tibia	5109	Contributed by Prof Johnson Eliot M.D. Washington D.C. May 1908
Cranium badly fractured and eroded from Waterloo. The skull cap is wanting and also the lower maxilla. A perforation by a ball appears about the middle of the left parietal	5110	From the Gibbon collection Formerly 109 Gibbon collection May 1908
A badly injured cranium from Waterloo. A flattened round musket ball, which is with the specimen has perforated the right parietal	5111	From the Gibbon collection Formerly 152 Gibbon collection.
Segment of left side of frontal bone showing a perforation produced by a blow	5112	From the Gibbon collection Formerly 126 Gibbon collection.
Senile skull, the alveolar processes are absorbed and the superior maxillaries are destroyed with the whole surface of the cranium is eroded as if by lupus exedens	5113	From the Gibbon collection Formerly 108 Gibbon collection
Upper half of right femur showing a united simple fracture through the trochanters. The union is very fine.	5114.	From the Gibbon collection Formerly 333 Gibbon collection.

Description	Section Number &c	Contributor
Upper half of the right femur, showing a partially united fracture through the trochanter	5115	From the Gibbon collection
Base of cranium showing a round pistol ball lodged between the left styloid process & foramen magnum Marked "atrocitas P.B.G."	5116	From the Gibbon collection
Calvaria showing syphilitic ulceration of the left parietal and occipital Marked "Paris 1847"	5117	From the Gibbon collection
A very interesting specimen of the occipital and atlas, showing a dislocation of the latter with long anchylosis Marked "Paris 1847"	5118	From the Gibbon collection Formerly 155 Gibbon collection.
A very interesting specimen of a cranium with the atlas which is luxated laterally & firmly ossified to the condyles of the occipital	5119	From the Gibbon collection Formerly 115 Gibbon collection
Lower third of right femur with contents above the entire condyle From Dr Goddard's private collection.	5120	From the Gibbon collection Formerly 283 Gibbon collection.

Description	Section Number &c	Contributor
Lower third of left Femur with irregular exostosis on the linea aspera	5121 Formerly 351 Gibbon collection	From the Gibbon collection
United simple fracture through trochanters of right Femur.	5122 Formerly 321 Gibbon collection	From the Gibbon collection
Simple depressed united fracture of the right temporal. A trephine had been applied to the right margin of the fontal, probably on account of epilepsy.	5123 Formerly 111 Gibbon collection	From the Gibbon collection
Depression of the right parietal of long standing, Trephining was performed probably for ep- ilepsy. Patient belonged to the Legion of San Patricio in the Mexican service. From the private collection of Dr Goodland.	5124, Formerly 114 Gibbon collection.	From the Gibbon collection
A cranium exhibiting ab- sorption of the frontal bone, by syphilitic ulceration.	5125 Formerly 116 Gibbon collection.	From the Gibbon collection
An os frontis showing old depressed fracture, very smoothly repaired	5126 Formerly 119 Gibbon collection	From the Gibbon collection

Description	Section Number &c	Contributor
<p>Calvaria showing a very long horizontal fissure of the left parietal & frontal bones from a negro. Presented to Nicholas Lane of Chambersburg Pa in 1849,</p>	<p>5127 Formerly 127 Gibson collection</p>	<p>From the Gibson collection</p>
<p>A cranium showing a long fissure of the right parietal, extending into the mastoid & petrous portions of the temporal,</p>	<p>5128</p>	<p>From the Gibson collection</p>
<p>A cranium showing extensive ulceration & absorption of the os frontis.</p>	<p>5129 Formerly 128 Gibson collection</p>	<p>From the Gibson collection</p>
<p>A cranium showing superficial caries of the os frontis</p>	<p>5130 Formerly 129 Gibson collection</p>	<p>From the Gibson collection</p>
<p>A cranium showing superficial caries of the os frontis</p>	<p>5131 Formerly 130 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Necrosis of right temporal</p>	<p>5132 Formerly 134 Gibson collection</p>	<p>From the Gibson collection</p>

Description	Section Number &c	Contributor
A cranium from a patient who recovered after trephining for a simple depressed fracture.	5133	From the Gibbon collection
	Formerly 149 Gibbon collection	
A cranium showing at- ceration of the os frontis	5134	From the Gibbon collection
	Formerly 150 Gibbon collection,	
A segment of an immen- sely thickened senile cranium exhumed from a grave,	5135	From the Gibbon collection
	Formerly 154 Gibbon collection	
A cranium showing depression of the os frontis	5136	From the Gibbon collection
	Formerly 155 Gibbon collection,	
Calvaria showing extensive radiating fractures of both parietals. The trephine has been applied near the right parietal, eminence and a triangular piece has been removed by Key's saw From the private collection of P. B. Goddard,	5137	From the Gibbon collection
	Formerly 156 Gibbon collection	
Cranium showing a fissured fracture of the right parietal and temporal, extending to the face. There is also an old united fract. of the nasal bone & the left parietal, sphenoid &c are apparently broken, Post mortem,	5138	From the Gibbon collection
	Formerly 161 Gibbon collection,	It is a very old cranium, the sutures being almost entirely obliterated.

Description	Section Number &c	Contributor
Cranium showing absorption of outer table of the os frontis, syphilitic caries.	5139	From the Gibbon collection.
	Formerly 162 Gibbon collection	
Left temporal with caries of the mastoid process and of the squamous portion.	5140,	From the Gibbon collection
	Formerly 185 Gibbon collection.	
A cranium showing perforation by trephine at the left parietal eminence. There is depressed united fracture of nasal bones.	5141	From the Gibbon collection
	Formerly 207 Gibbon collection.	
Section of the anterior portion of the cranium and bones of the face from a young subject. The maxilla bones and lower maxilla are carious.	5142.	From the Gibbon collection
	Formerly 215 Gibbon collection.	
A cranium showing a slight depression at the posterior angle of the left parietal. External to the depression is a perforation by a trephine probably done for epilepsy. Death from encephalitis.	5143	From the Gibbon collection
	Formerly 112 Gibbon collection	
A cranium showing destruction of the nasal, ethmoidal and palate bones by syphilitic lupus. Presented by Dr Loudon Dec. 1840. From female patient at Phila. Hosp.	5144.	From the Gibbon collection
	Formerly 216 Gibbon collection.	

Description	Section Number To	Contributor
<p>A cranium showing ulceration of the outer table of the right os frontis, with traces of the results of periostitis on the superior maxilla, malar and zygomatic processes of the temporal.</p>	<p>5145</p> <p>Formerly 120 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Lower jaw, showing a united simple fracture at the junction of the body and right ramus and another vertical fract. firmly united between the 1st canine and bicuspid</p>	<p>5146</p> <p>Formerly 94 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Lower jaw of an old person showing a firmly united simple fracture between the right canine and bicuspid</p>	<p>5147</p> <p>Formerly 92 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Lower maxilla of a child showing fracture of the alveolar process in front of the left incisor teeth</p>	<p>5148</p> <p>Formerly 91 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Lower maxilla exhibiting a united nearly horizontal fract. of the mental portion. The eminence at the symphysis for the attachment of the geni. hyoid. is very prominent.</p> <p>Marked Paris 1849.</p>	<p>5149</p> <p>Formerly 89 Gibson collection</p>	<p>From the Gibson collection</p>
<p>The lower maxilla of an old subject showing ulceration and absorption of the body with marks of the results of periostitis of the ramus.</p> <p>Marked Paris 1849</p>	<p>5150</p> <p>Formerly 209 Gibson collection</p>	<p>From the Gibson collection</p>

Description	Section Number &c	Contributor
The lower maxilla of an old subject, showing a fracture united with much deformity to the right of the chin.	5151 Formerly 90 Gibson collection.	From the Gibson collection
The left side of a lower maxilla showing a fissure and an orifice through which an abscess had been discharged	5152 Formerly 132 Gibson collection.	From the Gibson collection
Lumbar & lower dorsal vertebrae, probably of a deer (<i>Cervus virginianus</i>), the body of the third lumbar being nearly destroyed by caries.	5153 Formerly 144 Gibson collection.	From the Gibson collection
Nine dorsal vertebrae showing great deformity from rachitis	5154 Formerly 131 Gibson collection	From the Gibson collection
Two vertebrae ankylosed.	5155 Formerly 140 Gibson collection	From the Gibson collection
Two vertebrae ankylosed from caries.	5156. Formerly 146 Gibson collection.	From the Gibson collection

Description	Section Number &c	Contributor
Dorsal vertebrae showing great deformity from rachitis	5157	From the Gibbon collection
	Formerly 110 Gibbon collection	
Lumbar vertebrae showing a united fracture of the right pedicle	5158	From the Gibbon collection
	Formerly 135 Gibbon collection	
Two dorsal vertebrae showing extensive caries of the bodies of both.	5159	From the Gibbon collection
	Formerly 143 Gibbon collection	
Two lumbar vertebrae ankylosed & necrosed.	5160	From the Gibbon collection
	Formerly 169 Gibbon collection	
Two cervical vertebrae firmly ankylosed,	5161	From the Gibbon collection
	Formerly 138 Gibbon collection	
The axis & the third cervical vertebrae ankylosed,	5162	From the Gibbon collection
	Formerly 142 Gibbon collection	

Description	Section Number &c	Contributor
Two dorsal vertebrae with extensive osseous deposit on their bodies.	5163 Formerly 124. Gibson collection	From the Gibson collection
Two cervical vertebrae ankylosed with carious bodies	5164. Formerly 141. Gibson collection.	From the Gibson collection
The axis and the third and fourth cervical vertebrae, the oblique processes united by ankylosis.	5165 Formerly 139 Gibson collection	From the Gibson collection
The axis and third cervical vertebrae, the oblique processes being firmly ankylosed, also the third and fourth.	5166 Formerly 151 Gibson collection	From the Gibson collection
The lower four dorsal vertebrae and the first lumbar, the last dorsal and the lumbar are ankylosed from caries.	5167 Formerly 172. Gibson collection	From the Gibson collection
Two cervical vertebrae ankylosed, Two lumbar vertebrae showing caries of the bodies, Three of the lower vertebrae ankylosed	5168 Formerly 200 Gibson collection.	From the Gibson Cabinet

Description	Section Number &c.	Contributor
Curvature of the spine with degeneration of the bone.	5169	From the Gibson collection
	Formerly 1448 Gibson collection	
A section of the middle portion of the spinal column, showing a simple fracture of the body of one of the vertebrae	5170	From the Gibson collection
	Formerly 170 Gibson collection.	
Greater portion of the vertebral column, showing the results of rheumatic arthritis	5171	From the Gibson collection
	Formerly 147 Gibson collection.	
Three ribs from different subjects showing united simple fractures	5172	From the Gibson collection
	Formerly 259 Gibson collection	
Four ribs from different subjects showing united simple fractures	5173	From the Gibson collection
	Formerly 256 Gibson collection	
Stone ribs from different subjects	5174	From the Gibson collection
	Formerly 266 Gibson collection.	

Description	Section Number &c	Contributor
Section of two of the middle ribs, showing very perfectly united simple fractures.	5175 Formerly 266 Gibson collection	From the Gibson cabinet
Three ribs showing united simple fractures.	5176 Formerly 274 Gibson collection	From the Gibson collection
Four ribs showing united simple fractures	5177 Formerly 265 Gibson collection	From the Gibson collection
Three ribs showing united simple fractures.	5178 Formerly 273 Gibson collection.	From the Gibson collection
Eight th and ninth left ribs showing synostosis near the anterior portion of the intercostal space.	5179 Formerly 272 Gibson collection	From the Gibson collection
Four ribs exhibiting united simple fractures, with some attempt at repair.	5180 Formerly 275 Gibson collection	From the Gibson collection

Description	Section Number &c.	Contributor
Rib showing united simple fracture near the angle,	5181	From the Gibson collection
	Formerly 275 Gibson collection	
Lower half of left tibia showing a united oblique simple fracture in the lower third	5182	From the Gibson collection
	Formerly 403 Gibson collection	
Lower half of right tibia showing a united simple fracture in the lower third.	5183	From the Gibson collection
	Formerly 396 Gibson collection	
Right tibia & fibula exhibiting a united fracture of the middle third very oblique & united with much angular deformity	5184	From the Gibson collection
	Formerly 312 Gibson collection	
Lower two thirds of right tibia & fibula showing a united oblique simple fracture in the lower third of the former bone & an excoriation of the outer condyle.	5185	From the Gibson collection
	Formerly 318 Gibson collection	May 4/68.
Left tibia & fibula showing union with deformity after a simple fracture at the junction of the middle and lower thirds, with synostosis of the two bones.	5186	From the Gibson collection
	Formerly 46 Gibson collection.	May 4/68

Description	Section Number &c.	Description.
Upper half of the right tibia showing a united simple oblique fracture	5187	From the Gibbon collection
	Formerly 378 Gibbon collection	May 4/68
Bones of the right leg and foot, showing a luxation forward of the astragalus. The fibula exhibits an extraordinary concavity in its external middle third. From the Van Wyck private collection.	5188	From the Gibbon collection
	Formerly 96. Gibbon collection	May 4/68
Left tibia and fibula exhibiting a united fracture with deformity. Both bones are overlapping and are ossified together. Purchased in Paris, 1847.	5189	From the Gibbon collection
	Formerly 60 Gibbon collection	May 4/68
Lower half of right tibia, showing a very oblique united simple fracture.	5190	From the Gibbon collection
	Formerly 410 Gibbon collection	May 4/68
Lower half of left tibia, showing a very oblique consolidated simple fracture. There is a sinus leading probably to necrosed bone.	5191	From the Gibbon collection
	Formerly 388 Gibbon col.	May 4/68
Bones of left leg and foot except the phalanges showing a luxation outwards of the ankle with a very remarkable deformity of the articular surfaces of the Tibia and Fibula	5192	From the Gibbon collection
	Formerly 43 Gibbon collection	May 4/68

Description	Section Number &c.	Contributor
Portions of the left tibia and fibula showing a very old united fracture of the left shaft with much angular deformity	5193 Formerly 399, Gibbon collection	From the Gibbon collection May 4/68
Middle portion of the rt. tibia showing a singular fracture united with slight angular deformity	5194 Formerly 386 Gibbon collection	From the Gibbon collection May 4/68
Left tibia and fibula showing united simple fract. with lateral deformity	5195 Formerly 302 Gibbon collection	From the Gibbon collection May 4/68
Left fibula showing at upper third an exostosis	5196 Formerly 25 Gibbon collection	From the Gibbon collection May 4/68
Left tibia and fibula showing united fractures of both bones with great overlapping and deformity	5197 Formerly 42 Gibbon collection	From the Gibbon collection May 4/68
The right tibia and fibula showing scrofulous degeneration of the entire diaphyses	5198 Formerly 370 Gibbon collection	From the Gibbon collection May 4/68

Description	Section Number &c	Contributor
The left tibia very much curved showing degeneration of the cancellated structure, sawn open to show the cavity of an abscess,	5199 Formerly 397 Gibson collection	From the Gibson collection May 4/68
The lower half of the right tibia & fibula & bones of the foot. The astragalus is diseased & ankylosed to the calcaneum,	5200 Formerly 175 Gibson collection	From the Gibson collection May 4/68
Four fibulae showing united fractures,	5201 Formerly 314 Gibson collection	From the Gibson collection May 4/68
The middle portions of the shafts of the right tibia & fibula showing united simple fractures with overlapping,	5202 Formerly 320 Gibson collection	From the Gibson collection May 4/68
The left tibia & fibula united after a simple fract. of both bones overlapping with great deformity.	5203 Formerly Gibson collection	From the Gibson collection May 4/68
The left tibia & fibula united after a simple fract. of both bones, overlapping with great deformity,	5204 Formerly Gibson collection	From the Gibson collection May 4/68

Description	Section Number &c	Contributor
The right tibia and fibula except the superior articulating portions, showing synostosis & scrofulous degeneration	5205 Formerly Gibson collection	From the Gibson collection May 4/68
Right tibia, showing a united simple fracture of the upper third	5206 Formerly 392 Gibson collection	From the Gibson collection May 4/68
A fibula showing united Pott's fractures	5207 Formerly 54 Gibson collection	From the Gibson collection May 4/68
The lower half of the left tibia & fibula with long union at the lower extremity	5208 Formerly 355 Gibson collection	From the Gibson collection May 4/68
The upper half of the left tibia showing the cavity of an abscess of the medullary canal.	5209 Formerly 374 Gibson collection	From the Gibson collection May 4/68
The upper half of the right tibia & fibula exhibiting united simple fractures of both bones. In the tibia there are orifices leading to	5210 Formerly 319 Gibson collection	From the Gibson collection May 4/68

Description	Section Number &c	Contributor
The lower half of the right tibia & fibula showing extensive osseous deposit the result probably of fracture,	5211 Formerly 367 Gibson collection	From the Gibson collection May 4/68
The upper half of the right fibula showing united simple fracture,	5212 Formerly 26 Gibson collection.	From the Gibson collection May 4/68
Portions of the fibula removed	5213 Formerly 78 Gibson collection	From the Gibson collection May 4/68
Portions of two fibulae showing united simple fracture,	5214 Formerly 24 Gibson collection	From the Gibson collection May 4/68
The left tibia firmly ankylosed to the astragalus,	5215 Formerly 389 Gibson collection	From the Gibson collection May 4/68
Syphilitic nodes of the right tibia,	5216 Formerly 298 Gibson collection.	From the Gibson collection

Description	Section Number &c	Contributor
Right tibia much hypertrophied.	5217	From the Gibson collection
	Formerly 397 Gibson collection	May 4/68
Lower extremity of right tibia & fibula with hypertrophies after amputation.	5218	From the Gibson collection
	Formerly 467 Gibson collection	May 4/68
Lower extremities of left tibia & fibula with the calcaneum & astragalus, the latter is firmly ankylosed to the tibia & fibula	5219	From the Gibson collection
	E. 217, Girdland collection	May 4/68
The lower two thirds of the left tibia, carious and necrosed	5220	From the Gibson collection
	Formerly 48 Gibson collection,	May 4/68
Bones of the left foot showing the result of arthritis of the tarsal bones.	5221	From the Gibson collection
	Formerly 88 Gibson collection	May 4/68
The upper half of right tibia showing a large orifice communicating with disease of cancellated structure of the head of the bone.	5222	From the Gibson collection
	Formerly 354 Gibson collection,	May 4/68

Description	Section Number &c	Contributor.
Head & upper fourth of femur, showing hypostosis, probably after injury of the greater trochanter.	5223. Formerly 290 Gibbon collection	From the Gibbon collection May 4/68
The upper half of right femur necrosed after amputation	5224. Formerly 294 Gibbon collection.	From the Gibbon collection May 4/68
The upper half of right femur the extremity rounded off after amputation, the bone is extraordinarily light.	5225 Formerly 296 Gibbon collection.	From the Gibbon collection May 4/68
Stump of the right femur much diseased Marked "Paris 1849"	5226 Formerly 286 Gibbon collection.	From the Gibbon collection May 4/68
Left radius & ulna showing a fracture of ulna at the middle of the shaft, which had united by osseous deposition with the radius	5227 Formerly 38 Gibbon collection	From the Gibbon collection May 4/68
The right radius showing united simple fracture at the junction of the middle & upper third.	5228 Formerly 222 Gibbon collection	From the Gibbon collection May 4/68

Description	Section Number &c	Contributor
Section of the left radius showing united simple fract. of the middle of the shaft	5229 Formerly 163 Gibson collection	From the Gibson collection May 4/68
Sections of two right ulnas showing simple united fract. mid.	5230 Formerly 284 & 249 Gibson collection	From the Gibson collection May 4/68
Section of the shaft of the right humerus, showing a united simple fracture, very oblique at the junction of the upper & middle thirds	5231 Formerly 204 Gibson collection	From the Gibson collection May 4/68
Right humerus showing a united simple fracture, very oblique, above the condyle Given to Dr. Gibson by Dr. Mayley in 1854,	5232 Formerly 191 Gibson collection	From the Gibson collection May 4/68
Right humerus showing united simple fracture at the middle, the lower fragment is very much rotated inward	5233 Formerly 190 Gibson collection	From the Gibson collection May 4/68
Left humerus showing an oblique united simple fract. in the upper third.	5234, Formerly 187 Gibson collection.	From the Gibson collection May 4/68

Description	Section Number &c	Contributor
Right humerus of a child showing a united simple fracture of the middle of the shaft, with necrosis near the condyle	5235	From the Gibson collection
	Formerly 170 Gibson collection	May 4/68
Right humerus, showing a united simple fracture of the shaft, with overlapping	5236	From the Gibson collection
	Formerly 331 Gibson cabinet	May 4/68
Right humerus showing fracture distortion and shortening	5237	From the Gibson collection
	Formerly 306 Gibson cabinet	May 4/68
Right humerus showing ulceration, a necrosis of the lower portion of the shaft and inner condyle	5238	From the Gibson collection
	Formerly 232 Gibson cabinet	May 4/68
Left humerus of a young subject showing a united simple fracture of the anatomical neck, with absorption of the articular portions	5239	From the Gibson collection
	Formerly 167 Gibson cabinet	May 4/68
Bones of the right elbow, showing bony ankylosis after fracture	5240	From the Gibson collection
	Formerly 39 Gibson collection	May 4/68

Description	Section Number &c.	Contributed.
The upper half of right humerus, showing destruction of the head by ulceration	52441 Formerly 219 Gibson cabinet	From the Gibson collection May 4/68
The lower half of right humerus showing a very oblique united simple fract. above the condyles.	52442 Formerly 27 Gibson cabinet	From the Gibson collection May 4/68
The upper half of left humerus, with disease of the articular surface,	52443 Formerly 360 Gibson cabinet	From the Gibson collection May 4/68
Lower half of the left humerus showing ulceration & necrosis of the condyles ..	52444 Formerly 227 Gibson cabinet	From the Gibson collection May 4/68
Bones of the left elbow joint showing the ulna and humerus firmly ankylosed. There is also an oblique united simple fracture of the shaft of the humerus.	52445 Formerly 198 Gibson cabinet	From the Gibson collection May 4/68
Bones of the right elbow-joint showing false ankylosis after injury.	52446 Formerly 29 Gibson cabinet	From the Gibson collection. May 4/68.

Description	Section Number &c	Contributor
Bones of left elbow joint showing hyperostosis after fracture of the olecranon and coracoid processes.	5247 Formerly 239 Gibson collection	From the Gibson collection May 4/68
Skull showing a perforation by a large trephine on the left side of the coronal suture.	5248 Formerly	Presented by Prof Jos Henry Secy Smithsonian Inst. May 4/68
Cranium of a California Indian fractured by a tomahawk	5249 Formerly 6291 S. A.	Presented by Prof Jos. Henry Secy Smithsonian Inst. May 4/68
Cranium of a California Indian fractured by a tomahawk	5250 Formerly 6292 S. A.	Presented by Prof Jos Henry Secy Smithsonian Inst. May 4/68
Reproduction of the metacarpals and phalanges after necrosis	5251 Formerly 258 Gibson collection	From the Gibson collection May 4/68
Bones of the left elbow joint showing a very firm bony ankylosis Purchased in Paris 1847,	5252 Formerly 21 Gibson collection	From the Gibson collection May 4/68

Description	Section Number &c	Contributor
Bones of the left elbow anchylosed, apparently arising from a fracture above the condyles	5253	From the Gibson collection May 4/68
Bones of the right elbow showing a very firm bony anchylosis	5254	From the Gibson collection
Purchased in Paris, 1847,	Formerly 40 Gibson collection,	May 4/68
Cranium & lower jaw of a negro woman with a tumor on lower jaw (left side) supposed to be encephaloid. If on dissection the diagnosis is verified the skull & tumor will be sep- arately mounted Cranium is No 115 A 78 of Sec. IV.	5255	Contributed by D. R. Brown Act Asst Surgeon In charge of Howard Grove Hspt Richmond Va May 11/68
Specimen of the left common iliac with ligation of the aorta Case of Wilem Fancy Friedman	5256 XVIII. II. C.A. 82.	Contributed by the operator Prof. Hunter McGuire Richmond Va May 11/68
A condoid ball split by contact with bone, Case of James Curry Co "H" 20 th Penn. Corp.	5257	Contributed by Dr P. P. Wilson May 11/68
A portion of a cranium showing two perforations as though from pistol balls at the upper middle portion of the frontal and a greater portion of the right lower part of the skull is carried away	5258	Contributed by Theodore J. Floyd Hspt. Genl. USA. Supposed to be the skull of a Cheyenne Indian. May 12/68

Description	Section Number &c	Contributor
Tonsilotome made by Timan	5259	Purchased and deposited by order of the Surgeon General. U.S.A. May 12/68
Simple fracture of the neck of the left Femur. The specimen includes the upper extremity of the femur and a section of the innominatum	5260	From the Gibson collection Formerly 277 Gibson cabinet May 12/68
The upper extremity of the left Femur showing a united simple fracture through the trochanters	5261	From the Gibson collection Formerly 287 Gibson collection May 12/68
The upper third of the rt. Femur showing a fracture through the trochanters, uni- ted with great deformity and redundant osseous deposit	5262	From the Gibson collection Formerly 284 Gibson collection May 12/68
The upper third of the left Femur showing united fract. of the neck with much de- formity. The union is very firm	5263	From the Gibson collection Formerly 337 Gibson collection May 12/68
The upper third of right femur showing a united sim- ple fracture through the tro- chanters.	5264	From the Gibson collection Formerly 212 Gibson collection May 12/68

Description	Section Number &c.	Contributor
The upper third of the right femur, with fracture at the junction of the trochanters and pseudarthrosis	5265 Formerly 315 Gibson cabinet	From the Gibson collection May 12/68
Stump of the left femur showing a small exostosis near the extremity. It is alleged that there had been a fracture below the trochanters, if so it had united very perfectly.	5266 Formerly 292 Gibson cabinet	From the Gibson collection May 12/68
The left femur obliquely fractured in the shaft and united with much deformity.	5267 Formerly 295 Gibson cabinet	From the Gibson collection May 12/68
The right femur showing a united fracture of the middle, overlapping and deformity	5268 Formerly 291 Gibson cabinet	From the Gibson collection May 12/68
The right femur showing a very oblique comminuted of shaft united with overlapping.	5269 Formerly 234 Gibson cabinet	From the Gibson collection May 12/68
The left femur showing a united simple fracture of the middle with overlapping and deformity.	5270 Formerly 218 Gibson cabinet	From the Gibson collection May 12/68

Description	Section Number &c.	Contributor.
The left femur showing an exostosis at the middle of the linea aspera.	5271	From the Gibson collection
	Formerly 314 Gibson cabinet	May 12/68
The lower half of the left femur with a prominent exostosis.	5272	From the Gibson collection
	Formerly 300 Gibson cabinet	May 12/68
The lower two thirds of the right femur, showing a remarkably prominent exostosis above the middle of the inner edge.	5273	From the Gibson collection
	Formerly 293 Gibson cabinet	May 12/68
The left femur with great antero-posterior curvature at the junction of the upper and middle thirds	5274	From the Gibson collection
	Formerly 305 Gibson cabinet.	May 12/68
The right femur with great antero-posterior curvature.	5275	From the Gibson collection
	Formerly 314 Gibson cabinet	May 12/68
The right femur showing a fracture of the shaft with great overlapping	5276	From the Gibson collection
	Formerly 270 Gibson cabinet	May 12/68

Description	Section Number &c.	Contributor
Left femur showing anterior curvature from myelitis. The bone appears to have been much strengthened in later life by the development of the linea aspera	5277 Formerly 324 Gibson collection	From the Gibson collection May 12/68
Left femur showing an exostosis along the linea aspera of trochanter major	5278 Formerly 303 Gibson collection	From the Gibson collection May 12/68
Left femur with simple fracture of the middle of the shaft with overlapping & deformity.	5279 Formerly 348 Gibson collection.	From the Gibson collection May 12/68
Condyles of the left femur showing an exostosis of the inner condyle	5280 Formerly 328 Gibson collection	From the Gibson collection May 12/68
The right femur with the upper extremities of the tibia & fibula. There is a united simple fracture at the junction of the upper & middle thirds, firmly united after great comminution	5281 Formerly -	From the Gibson collection May 13/68
The left femur which has been fractured very obliquely & with great comminution in the middle of the lower third & has firmly united though abscesses existed to which large sinuses lead, <small>Two sections are made to show the cavities of the abscesses.</small>	5282 Formerly 350 Gibson collection	From the Gibson collection May 13/68

Description	Section Number	Contributor
A nearly transverse simple fracture of the right femur in a young subject, united with much deformity and a large diffusion of callus	5283	From the Gibson collection May 13/68
Cranium showing a wound of entrance of a pistol ball through the squamous portion of the right temporal bone, with extensive radiating fractures of the frontal occipital and both parietals.	5284	From the Gibson collection May 13/68
Left ramus & half the body of the lower maxilla extirpated on account of spina ventrosa. Also preparation of right portion & probably from same subject,	5285	From the Gibson collection Formerly 137 th of 136 Gibson collection May 13/68
Bony ankylosis of middle and distal phalanges of one of the fingers.	5286	From the Gibson collection Formerly May 13/68
The left scapula and humerus united by firm bony ankylosis.	5287	From the Gibson collection Formerly 240 Gibson collection May 13/68
Fracture of the anatomical neck of the left humerus and formation of a new articular facet of the scapula	5288	From the Gibson collection Formerly 237 Gibson collection May 13/68

Description	Section Number &c	Contributor
Fracture & displacement of the left humerus with formation of a new articular surface of the scapula.	5289 Formerly 262 Gibson cabinet	From the Gibson collection May 13/68
The right humerus showing a diseased head.	5290 Formerly 170 Gibson cabinet	From the Gibson collection May 13/68
The right scapula and humerus, the latter has been extensively shattered in the upper half leaving bifid head, the lesser portion of which articulates with the glenoid cavity of the larger with a new articular surface between the coracoid process	5291 Formerly 238 Gibson cabinet	From the Gibson collection Presented to Prof Gibson by Dr J.C. Macmillan Mont Co Pa. May 14/68
The left scapula and humerus showing a moderately firm false ankylosis.	5292 Formerly 253 Gibson cabinet.	From the Gibson collection May 14/68
A section of the right scapula & clavicle, the latter firmly united by bony ankylosis to the coracoid process.	5293 Formerly 197 Gibson cabinet	From the Gibson collection May 14/68
The left scapula showing a united fracture of the body.	5294 Formerly 164 Gibson cabinet	From the Gibson collection May 14/68

Description	Section Number &c	Contributor
The left scapula showing a partially united simple fracture, with ulceration of the edges of the fissures one of which runs parallel with the spine and another with the posterior margin	5295 Formerly 167 Gibbon collection	From the Gibbon collection May 14/68
The left scapula and scapula the inner portion of the glenoid cavity is levelled off as though the head of the humerus luxated under the coracoid process had rested for a time upon the inner margin of the glenoid cavity & the front of the neck of the scapula.	5296 Formerly 167 Gibbon collection	From Dr J. W. Nall's collection May 14/68
The right scapula showing a pseudoarthrosis of the spine. The acromion is bent downward, its lower surface has formed part of the articulation with the head of the humerus,	5297 Formerly 167 Gibbon collection	From the Gibbon collection May 14/68
The left scapula & the upper half of the humerus which has been amputated in the middle & show a well rounded stump. Caries has involved the joint and the greater portion of both bones	5298 Formerly 203 Gibbon collection	From the Gibbon collection May 14/68
Left scapula of a large subject, there is slight exostosis on the ventral surface opposite the end of the spine. There are several penetrated openings near the anterior margin	5299 Formerly 195 Gibbon collection	From the Gibbon collection May 14/68
Left scapula showing a united fracture of the glenoid cavity,	5300 Formerly 183 Gibbon collection	From the Gibbon collection May 14/68

Description	Section Number &c	Contributor.
<p>The left humerus of a child showing united fractures of the shaft of an impacted fracture of the head. Apparently from a diseased subject.</p>	<p>5301 Formerly 194 Gibson collection</p>	<p>From the Gibson collection May 14/68</p>
<p>A series of nine clavicles showing the different types of deformity in the union of simple fractures of that bone. Five were collected by Dr Gibson, two by Dr Van Meekren by P. B. Goddard and one by Dr Isaac Hayes</p>	<p>5302 Formerly 268 Gibson collection</p>	<p>From the Gibson collection May 14/68</p>
<p>A sternum showing cavity of the manubrium</p>	<p>5303 Formerly 180 Gibson collection</p>	<p>From the Gibson collection May 14/68</p>
<p>A right clavicle showing an exostosis at the posterior border of the acromial extremity.</p>	<p>5304 Formerly 184 Gibson collection</p>	<p>From the Gibson collection May 14/68</p>
<p>The bones of the left upper extremity (except the clavicle & radius) showing a fracture above the condyles of the humerus united with deformity, the heads of the radius & ulna luxated the hand in position.</p>	<p>5305 Formerly 201 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Bones of the right elbow, the joint is firmly ankylosed,</p>	<p>5306 Formerly 21 Gibson collection.</p>	<p>From the Gibson collection May 14/68</p>

Description	Section Number &c	Contributed
The left scapula, showing a subcoracoid articular facet occasioned by a laceration inwards of the head of the humerus	5307 Formerly 210 Gibson collection	From the Gibson collection May 14/68
Bones of the right elbow, showing an ununited fract. of outer condyle -	5308 Formerly 107 Gibson collection	From the Gibson collection May 14/68
The lower extremity of left humerus and upper half ulna, shows a pseudarthrosis and a united fracture.	5309 Formerly 226 Gibson collection	From the Gibson collection May 14/68
Bones of the left elbow, The joint is destroyed by ulceration.	5310 Formerly 230 Gibson collection.	From the Gibson collection May 14/68
Bones of the right elbow, firmly ankylosed.	5311 Formerly 248 Gibson collection	From the Gibson collection May 14/68
Bones of the right elbow joint, necrosed after fracture.	5312 Formerly 165 Gibson collection	From the Gibson collection May 14/68

Description	Section Number &c.	Contributor
United fractures of both condyles of humerus (right). The ulna & humerus are ankylosed.	5313	From the Gibson collection
	Formerly 186 Gibson cabinet	May 14/68
Bones of the left hand, forearm & lower half of the humerus showing the results of extensive periostitis. There seems to have been an ununited fracture of the humerus, the extremity being rounded off.	5314	From the Gibson collection
	Formerly 255 Gibson cabinet.	May 14/68
Seventeen vertebrae showing ulceration & necrosis.	5315	From the Gibson collection
	Formerly 171 Gibson collection	May 14/68
Caries of the vertebrae, the bodies of the last two dorsal & nearly destroyed.	5316	From the Gibson collection
	Formerly -	May 14/68
Caries & curvature of the vertebrae, the bodies of two of the dorsal are nearly destroyed.	5317	From the Gibson collection
	Former No. unknown	May 14/68
The vertebral column & ribs, showing extensive lateral curvature.	5318	From the Gibson collection
	Former No. unknown	May 14/68

Description	Section Number To	Contributed.
The right ulna nd radius showing a united fracture of the coronoid process of the ulna nd deformations of both radius nd ulna.	5319 Formerly 196 Gibson cabinet	From the Gibson cabinet May 13/68
The left ulna showing a united simple fracture two inches above the lower extremity.	5320 Formerly 221 Gibson cabinet	From the Gibson cabinet May 13/68
Sections of two ulnae showing simple united fractures. In one there is considerable overlapping of one of the fragments. In both the fracture is at the junction of the lower nd middle third.	5321 Formerly 247 Gibson cabinet	From the Gibson cabinet May 13/68
The right ulna showing a united fracture of the coronoid process, the line of fracture is distinctly discernable across the greater sigmoid notch.	5322 Formerly 245 Gibson cabinet	From the Gibson Cabinet May 13/68
The left radius nd ulna with the carpal nd meta-carpals, showing a simple united fracture with exposure an inch and a half above the lower extremity.	5323 Formerly 164 Gibson cabinet	From the Gibson cabinet May 13/68
Bones of the right forearm with fracture nd distortion of the radius.	5324 Formerly 257 Gibson cabinet	From the Gibson cabinet May 13/68

Description	Section Number &c.	Contributor.
<p>The lower half of the left radius showing a united fracture of the lower extremity, "Barton's fracture."</p>	<p>5325</p> <p>Formerly 252 Gibson cabinet</p>	<p>From the Gibson collection</p>
<p>The upper half of the left radius & ulna, amputated at the middle, showing a well rounded stump.</p>	<p>5326</p> <p>Formerly 192 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Bones of the left forearm, the ulna has been fractured and has united to the radius at the junction of the lower and middle thirds.</p>	<p>5327</p> <p>Formerly 254 Gibson collection</p>	<p>From the Gibson collection</p>
<p>Bones of the carpus and metacarpus (except the trapezoid), showing bony ankylosis between the semilunar & cariforme, the first metacarpal and the trapezium Marked "Paris 1847"</p>	<p>5328</p> <p>Formerly 261 Gibson collection</p>	<p>From the Gibson collection</p>
<p>The left carpus and metacarpus (except first metacarpal) showing ankylosis of all the bones of the wrist</p>	<p>5329</p> <p>Formerly 260 Gibson collection.</p>	<p>From the Gibson collection</p>
<p>Right carpus & metacarpus both rows of the carpal bones are carious. The scaphoid is nearly destroyed or else fused with the os magnum.</p>	<p>5330</p> <p>Formerly 260 Gibson collection</p>	<p>From the Gibson collection</p>

Description	Section Number &c.	Contributor
Bones of the right hand showing caries of the carpus.	5331 Formerly 260, Gibson cabinet	From the Gibson collection
The upper half of the right humerus showing a well rounded stump. The head is broken and the much ramified cancellated structure is exposed.	5332 Formerly 224 Gibson cabinet	From the Gibson collection
The right innominate showing a united fracture of the ilium.	5333 Formerly 177 Gibson collection	From the Gibson collection
The sacrum and a portion of the right innominate showing a united fracture.	5334 Formerly 179 Gibson cabinet	From the Gibson collection
Parts of the occipital and right parietal & temporal bones showing destruction caused by exit of a conoidal musket ball fired at a distance of 6 feet entering the face, during out-portion of the maxilla & teeth, together with fragments of bullet removed from Robt Floyd Co E 11 th U.S. Inf.	5335	Contributed by J. H. Partholl West Surg. USA. Recd May 13/68
The right common carotid, the external & internal & some of their branches, also the jugular vein divided by a ball. Case of Robt Floyd Co E 11 th U.S. Infantry.	5336	Contributed by J. H. Partholl West Surg. USA. Recd May 13/68

Description	Section Number &c	Contributed
A pelvis showing disease, or rather the results of chronic arthritis, of the cotyloid cavities	5337	From the Gibbon collection
	Formerly 176 Gibbon cabinet	
The right innominate, showing ulceration of the acetabulum.	5338	From the Gibbon collection
	Formerly 178 Gibbon cabinet.	
Section of the left femur, showing a rounded stump.	5339	From the Gibbon collection
	Formerly 338 Gibbon cabinet	
The upper third of right tibia, showing united fracture with exostosis.	5340	From the Gibbon collection
	Formerly 86 Gibbon cabinet	
The first metatarsal and proximal phalanx of the left foot, showing ankylosis of the sesamoids, metacarpal and phalanx.	5341	From the Gibbon collection
	Formerly 79 Gibbon cabinet	
The first phalanx of the right great toe, showing a united fracture of the distal extremity.	5342	From the Gibbon collection
	Formerly 79 Gibbon cabinet.	

Description	Section Number	Contributor
Bones of the right knee-joint firmly ankylosed.	5343	From the Gibson collection
	Formerly 413 Gibson cabinet	
The upper half of a left femur, a diseased stump. The bone is sawn through its axis to show the results of osteomyelitis	5344	From the Gibson collection
	Formerly 285 Gibson cabinet.	
The upper half of a very large right femur, a diseased stump,	5345	From the Gibson collection
	Formerly 294 Gibson cabinet	
The upper two thirds of a femur, showing an overlapping oblique united fracture. The bone is crumbling.	5346	From the Gibson collection
	Formerly 288 Gibson cabinet.	
The left femur of a subject from 16 to 28, showing necrosis of the entire shaft.	5347	From the Gibson collection
	Formerly 234 Gibson cabinet (duplicate)	
Simple ununited fracture of the shaft of the right femur.	5348	From the Gibson collection
	Formerly 270 Gibson cabinet (duplicate)	

Description	Section Number &c	Contributor
Left femur thickened by periostitis	5349 Formerly 308 Gibson cabinet	From the Gibson collection
Left femur sawn transversely in the middle. Greatly enlarged & thickened by scrofulous degeneration.	5350 Formerly 316 Gibson cabinet	From the Gibson cabinet
Left femur much curved & distorted.	5351 Formerly 311 Gibson cabinet	From the Gibson collection
Lower extremity of the left femur, patella, tibia fibula & calcaneum. The latter bone is carious. The tibia is recurved & carious, the knee joint is disorganized.	5352 Formerly 231 Gibson cabinet	From the Gibson collection
The left patella fractured transversely & united by ligaments. The margins of the fracture are separated about two inches.	5353 Formerly 352 Gibson cabinet	From the Gibson collection May 16/68
The left patella fractured nearly transversely & united by a thin broad ligament.	5354 Formerly 357 Gibson cabinet	From the Gibson collection May 16/68

Description	Section Number &c.	Contributor
The right patella fractured with some comminution, but firmly united by short and strong ligaments.	5355	From the Gibson cabinet
	Formerly 353 Gibson cabinet	May 16/68
The bones of left knee-joint of a child, showing a dislocation outward of the patella & false ankylosis of the joint	5356	From the Gibson collection
	Formerly 344 Gibson collection	May 16/68
A series of six exostoses	5357	From the Gibson collection
	Formerly 73 Gibson cabinet	May 16/68
The lower fourth of the right femur & patella show deep ulcerations of the condyles posteriorly & the patella is displaced outwardly.	5358	From the Gibson collection
	Formerly -	May 16/68
Lower portion of the shaft of the left femur, showing a partly united simple fracture, a very large sequestrum	5359	From the Gibson collection
	Formerly -	May 16/68
Bones of the right knee-joint, showing a fracture of the femur slightly oblique antero-posteriorly, firmly united, the anterior edge of the upper fragment had passed upon the patella & deformed it.	5360	From the Gibson collection
	Formerly 340 Gibson cabinet	May 16/68

Description	Section Number To	Contributor
The lower half of a left femur showing a united simple fracture just above the condyles. The lower portion of the shaft is expanded and has several orifices as though it enclosed necrosed bone.	5361	From the Gibson collection May 16/68
The upper extremity of the left tibia, the bone has been amputated at the place of election and the stump is well rounded. The bone is extraordinarily light and spongy, showing scarcely any laminated structure.	5362	From the Gibson collection May 16/68
The lower half of the left femur, from which the condyles are nearly broken away, showing ankylosis of the patella.	5363	From the Gibson collection May 16/68
Bones of the right knee-joint showing a transverse fracture of the patella with ligamentous union, short and strong.	5364	From the Gibson collection May 16/68
Bones of the left knee-joint, the condyles are much enlarged and firmly ankylosed to the patella and tibia.	5365	From the Gibson collection May 16/68
Bones of the right knee joint showing a lateral luxation, the bones of the leg are exorted and the head of the tibia and the condyles of the femur are greatly deformed.	5366	From the Gibson collection May 16/68

Description	Section Number &c.	Contributor
Bones of the right knee-joint, the head of the tibia is partly luxated outward, the upper outer angle of the patella shows a united fractured fragment, all the bones are firmly ankylosed.	5367 Formerly 343 Gibon collection	From the Gibon collection May 16/68
The lower extremity of the left femur, the patella and the upper extremity of the tibia, showing a luxation outward of the patella which is firmly ankylosed to the condyle ^{inner part of head of tibia} is partly absorbed.	5368 Formerly 334 Gibon collection	From the Gibon collection May 16/68
The bones of the left knee-joint showing disease of the head of the tibia partial luxation inward and false ankylosis.	5369 Formerly 372 Gibon collection	From the Gibon collection May 16/68
The bones of the right leg and lower half of femur ^{comp.} at the middle of thigh on account of scrofulous disease several sequestræ are enclosed in a great involucrum	5370 Formerly	From the Gibon collection May 16/68
Lower two thirds of the bones of the leg (right) and tarsus and metatarsus, showing a united simple fracture of the shaft of the tibia.	5371 Formerly	From the Gibon collection May 16/68
The left tibia or rather an immense involucrum enclosing nearly the entire length of the bone	5372 Formerly 57 Gibon collection	From the Gibon collection May 16/68

Description	Section Number &c.	Contributor
Fracture of the middle of the shaft of the right tibia	5373 Formerly 53 Gibson cabinet	From the Gibson collection May 16/68
The lower half of the left tibia showing caries and necrosis of the posterior and outer portions of the lower third.	5374 Formerly 54 Gibson cabinet	From the Gibson collection May 16/68
A tibia with ulceration and absorption of the head.	5375 Formerly 381 Gibson cabinet	From the Gibson collection May 16/68
The right tibia and fibula greatly enlarged and thickened the angles of the prisms being studded with exostoses	5376 Formerly 371 Gibson cabinet	From the Gibson collection May 16/68
The left tibia and fibula necrosed at the lower portion. There is an exostosis about three inches above the malleolus	5377 Formerly 365 Gibson cabinet	From the Gibson collection May 16/68
The right tibia and fibula the leg has been amputated at the place of election on account of an ununited fract, with extensive necrosis at the junction of the lower and middle thirds	5378 Formerly 46 Gibson cabinet	From the Gibson collection
The bones of the foot formerly mounted with the specimen were not discarded and have been placed in the anatomical section. See 112, A, as a ligamentous preparation		May 18/68

Description	Section Number &c.	Contributor
Greater portion of right tibia showing caries and necrosis of the shaft	5379	From the Gibson cabinet
	Formerly 233 Gibson cabinet	May 18/68
Four fibulae much thickened by osseous deposition probably from syphilitic periostitis	5380	From the Gibson cabinet
	Formerly 35 & 55 Gibson cabinet	May 18/68
Lower two thirds of right tibia & fibula amputated a little below the place of election on account of caries & necrosis case of — Kelly aged 40 Amputated by Prof Wm Gibson 1839	5381	From the Gibson cabinet
	Formerly 349 Gibson collection	May 18/68
Lower third of the bones of the leg, amputated on account of an ununited & complicated fracture of the shafts. From a patient of Dr Parish Keston Co Penna 1843. The bones of the foot are mounted in the Anatomical Section, 113, being uninjured	5382	From the Gibson cabinet
	Formerly 444 Gibson cabinet	May 18/68
Six fibulae showing enlargement & thickening from syphilitic periostitis,	5383	From the Gibson cabinet
	Formerly 402 Gibson collection	May 18/68
A portion of the shaft of the right fibula showing a ununited simple fracture of the lower third (Pott's Fract.)	5384	From the Gibson cabinet
	Formerly 36 Gibson collection	May 18/68

Description	Section Number &c.	Contributor
The right fibula showing an ununited simple fracture of the upper third	5385	From the Gibson collection
	Formerly 49 Gibson cabinet	May 18/68
The right fibula necrosed and enlarged.	5386	From the Gibson collection
	Formerly 356 Gibson cabinet	May 18/68
The right tibia and fibula, the shafts being nearly destroyed by caries	5387	From the Gibson collection
	Formerly 223 Gibson cabinet	May 18/68
Four tibiae enlarged and thickened by periostitis	5388	From the Gibson collection
	Formerly	May 18/68
Amputated two thirds of the right tibia of a negro of sixteen, the lower end being sawn open to show the cavity of an abscess.	5389	From the Gibson collection
	Formerly 409 Gibson cabinet	May 18/68
Lower two thirds of the right tibia amputated, caries and necrosis of the lower third.	5390	From the Gibson collection
	Formerly 411 Gibson cabinet	May 18/68

Description	Section Number &c.	Contributor
<p>The left tibia showing an abscess incysted near the head, with osseous deposits, The tibia weighs 15 g. the fibula 14 g. Fibula transferred to 52449,</p>	5391	From the Gibson collection
	Formerly 398 Gibson cabinet	May 18/68
<p>The right tibia showing a partially united fracture of the outer condyle. The shaft is enlarged & thickened,</p>	5392	From the Gibson collection
	Formerly	May 18/68
<p>Bones of the left knee-joint except the patella. The articular cartilage is ossified, there is firm ankylosis of the head of the tibia & fibula, the head of the tibia is much deformed,</p>	5393	From the Gibson collection
	Formerly 347 Gibson cabinet	May 18/68
<p>The lower two thirds of the left tibia & fibula, the astragalus & cuboid, The limb has been amputated at the place of election on account of ulceration & caries of the tibia.</p>	5394	From the Gibson collection
	Formerly	May 18/68
<p>The shaft & lower extremity of the right tibia, enlarged & thickened,</p>	5395	From the Gibson collection
	Formerly	May 18/68
<p>The right tibia enlarged & thickened,</p>	5396	From the Gibson collection
	Formerly 313 Gibson cabinet	May 18/68

Description	Section Number &c	Contributor
Two examples of the left tibia & fibula amputated at the place of election on account of thickening by periostitis.	5397	From the Gibson collection
	Formerly 370 Gibson cabinet	May 18/68
A portion of the tibia of a child showing scrofulous necrosis	5398	From the Gibson collection
	Formerly 85 Gibson cabinet,	May 18/68
The left tibia & fibula diseased of the femur for which trephining has been performed	5399	From the Gibson collection
	Formerly 373 Gibson cabinet	May 18/68
The left tibia the shaft being ulcerated & carious; the lower extremity has been sawn off.	5400	From the Gibson collection
	Formerly 384 Gibson collection	May 18/68
The lower extremities of the tibia & fibula showing anchylorosis at the lower extremities & bony deposition	5401	From the Gibson collection
Marked "Paris 1847"	Formerly 363 Gibson cabinet	May 18/68
Lower two thirds of the right tibia & fibula & the astragalus. All three bones are stunted, thickened & roughened	5402	From the Gibson collection
The ankle joint disorganized	Formerly 235 Gibson cabinet	May 18/68
Marked "Paris 1847"		

Description	Section Number &c	Contributed
The lower half of the right tibia, showing destruction of articular surface by scrofulous caries.	5403	From the Gibson collection
	Formerly 406 Gibson cabinet	May 18/68
The lower halves of the right tibia ^d and fibula, illustrating the destruction of the ankle-joint by scrofulous caries.	5404	From the Gibson collection
	Formerly 359 Gibson cabinet.	May 18/68
The lower third of the left tibia, showing ulceration ^d & caries of the shaft.	5405	From the Gibson collection
	Formerly 395 Gibson cabinet	May 18/68.
A section of the shaft of the right tibia, showing hyperostosis from a blow.	5406	From the Gibson collection
	Formerly 368 Gibson cabinet	May 18/68
The left tibia showing a large flat exostosis on the inner part of the lower third. The shaft of the entire bone is bent.	5407	From the Gibson collection
	Formerly 382 Gibson cabinet	May 18/68
A section of the shaft of the right tibia.	5408	From the Gibson collection
	Formerly 369 Gibson cabinet.	May 18/68

Description	Section Number &c	Contributor
The lower two thirds of the left tibia & fibula, the tarsus & metatarsus, amputated on account of scrofulous ulceration of the calcaneum outer malleolus &c.	5409 Formerly 47 Gibson cabinet	From the Gibson cabinet May 18/68
Specimen described as osteo-sarcoma? Disease & ulceration of the calcaneum	5410 Formerly 81 Gibson cabinet	From the Gibson collection May 18/68
The left calcaneum & scaphoides firmly ankylosed.	5411 Formerly 80 Gibson cabinet	From the Gibson collection May 18/68
The left metatarsal bones, the shafts of which are greatly thickened & enlarged.	5412 Formerly 84 Gibson cabinet	From the Gibson collection May 18/68
The right patella showing bony union, with very little separation after a transverse simple fracture.	5413 Formerly 340 Gibson cabinet	From the Gibson collection
The left patella showing united simple fracture through the outer facet, firmly united by osseous deposit.	5414 Formerly 340 Gibson cabinet	From the Gibson collection

Description	Section Number &c	Contributor
The right patella showing osseous union after a stellated fracture.	5415	From the Gibson collection
	Formerly 346 Gibson cabinet	May 19/68
Three patellae deformed or diseased by inflammation of the bursa.	5416	From the Gibson collection
	Formerly 346 Gibson cabinet	
The left innominate and upper half of the femur, showing a firm ankylosis at the hip with immense osseous deposit, great spines of bone projecting from the trochanteric line & linea aspera	5417	From the Gibson collection
		An illegible reference to Hays' Journal is written on the return.
The right femur the head nearly destroyed by exostosis	5418	From the Gibson collection
	Formerly 217 Gibson cabinet	
The greater portion of the vertebral column, greatly curved backward & ankylosed.	5419	
The greater portion of the vertebral column with exostosis & ankylosis.	5420	
		May 19/68

Description	Section Number &c	Contributor
<p>Portion of left innominate and upper part of femur, showing enlargement & deformity of the acetabulum & head of femur Marked "Chronic rheumatic arthritis"</p>	5421	
<p>The left femur, the upper half of the shaft & nearly destroyed by scrofulous de- generation.</p>	5422	From the Gibbon collection
<p>Formerly 214 Gibbon Cabinet</p>		
<p>The upper half of right femur showing the results of chronic rheumatic ar- thritis,</p>	5423	From the Gibbon collection
<p>Formerly 289 Gibbon Cabinet</p>		
<p>An osteo sarcomatous tu- mor of the upper jaw removed by operation. Marked "Anderson case"</p>	5424	From the Gibbon collection
<p>Formerly 113 Gibbon cabinet,</p>		
<p>Left femur, an alleged case of united intra capsular fracture.</p>	5425	From the Gibbon collection
<p>Formerly 326 Gibbon Cabinet</p>		May 19/68
<p>The right femur, the head absorbed, coxalgia in a young subject</p>	5426	From the Gibbon collection
<p>Formerly 291 Gibbon cabinet,</p>		May 19/68

Description	Section Number &c	Contributor
The right innominatum and femur, the latter is firmly ankylosed to the former in acute or extreme flexion	5427	May 1968
A section of the right innominatum and the great trochanter femoris showing a firm bony core femoral ankylosis.	5428 Formerly 276 Gibbon cabinet	From the Gibbon collection May 1961
The upper half of left femur, showing erosion of the articular extremity. Marked "Paris 1847"	5429 Formerly 211 Gibbon cabinet	From the Gibbon collection May 1961
Greater portion of the vertebral column, showing caries of the bodies of the lower dorsals and upper lumbars.	5430	From the Gibbon collection May 1961
A mamma extirpated on account of schiurus	5431	Contributed by Dr N. S. Lincoln Washington D. C. May 1968
Ligamentous skeleton of a female with great antero-posterior curvature of the vertebral column.	5432	From the Gibbon collection May 22/61

Description	Section Number &c	Contributor
Ligamentous skeleton of a male with great antero-posterior curvature of the vertebral column.	5433	From the Gibson collection
		May 22/68
An oil painting of a case of cancer of the lip described in Vol I Gibson's Surgery seventh edition, page 170.	5434	From the Gibson collection
		May 22/68
An oil painting of a fungus <i>Haematodes</i> in a boy of nine years see Gibson's Surgery Vol I seventh edition, page 195.	5435	From the Gibson collection
		May 22/68
An oil painting of a Fungus <i>Haematodes</i> of the shoulder & arm see Gibson's Surgery Vol I seventh edition page 195	5436	From the Gibson collection
		May 22/68
An oil painting representing a case of encephaloid cancer of the eye in a woman sixty years of age, see Gibson's Surgery Vol I, seventh edition page 168.	5437	From the Gibson collection
		May 22/68
The upper third of the left femur, showing an extra-capsular simple fracture with impaction & pseudarthrosis. It was formerly mounted as a ligamentous preparation, but the ligaments were so eroded by insects that it was necessary to remove them.	5438	From the Gibson collection
		May 26/68

Description	Section Number &c.	Contributor
Cast of a case of Talipes Varus of the left foot of a child,	54439	From the Gibson collection
	Formerly 75 Gibson Cabinet	May 28/68
Plaster cast of a case of Talipes Varus of the left foot of a child	54440	From the Gibson collection
	Formerly 76 Gibson Cabinet	May 28/68
A box containing three ear specula and an otoscope Manufactured by J. H. Gemmig Phila., Penna.	54441 XXVIII B.A. 159	Purchased & deposited by order of the Surgeon General U.S.A.
		June 2/68
Head of left os femoris excised for gunshot injury Case of Michael Welch 10 Ky. Vols.	54442	Contributed by Dr. T. H. Gross late Surgeon U.S.A. 608, 6 th Street Phila Pa
		June 3/68
Blumenthal's Obstetrical short Forceps Manufactured by Timan & Co N. York.	54443	Purchased & deposited by order of the Surgeon General U.S.A.
		June 5/68
Elliott's long Obstetrical Forceps. Manufactured by Timan & Co N. York	54444	Purchased & deposited by order of the Surgeon General U.S.A.
		June 5/68

Description	Section Number &c.	Contributor
Canis in the bodies of the fifth & sixth dorsal vertebrae	54445	From the Gibson collection
	(Entered with 5167) Formerly 172 Gibson cabinet	June 9/68
Fibula showing a united fracture of the upper portion.	54446	From the Gibson collection
	Entered with 5207	June 12/68
Specimen of comminuted fracture of left thigh produced by a street car.	54447	Presented by Surgeon B. J. D. Darwin M.A.
		June 26/68
Lower third of the left femur with ankylosis of the patella, the bone is very spongy and the condyles are worn off.	54448	From the Gibson collection
		July 2/68
Right fibula, showing extensive necrosis.	54449	From the Gibson collection
		July 7/68
Right femur, patella and upper fourth of tibia & fibula showing a united gunshot fracture of the upper portion of the femur with false ankylosis of the knee. Prof Geo Rouse.	54450	Contributed by Surgeon John Brooke M.A.
		July 8/68

Description	Section Number &c.	Contributor
A united simple fracture with much deformity of the right humerus of a goose	54451	From the Gibson collection July 9/68
A united simple fracture of the left tibia & fibula, the bones are twisted half around so that the anterior portion stands posteriorly. (From a chicken)	54452	From the Gibson collection July 9/68
A united fracture with much deformity of the left femur of a chicken.	54453	From the Gibson collection July 9/68
Anchylosis at the knee-joint of a chicken, following a united fracture of the lower fourth of the left femur.	54454	From the Gibson collection July 9/68
The right humerus of a duck united with much deformity.	54455	From the Gibson collection July 9/68
Right and left humeri of a goose, showing simple fractures united with much deformity.	54456	From the Gibson collection July 9/68
